

BRAKE MECHANISM FOR TOOL

ABSTRACT OF THE DISCLOSURE

A brake mechanism includes a trigger device and a brake device arranged in a casing of a tool. The trigger device is a switch to activate the power. The brake device is to depress the power that is transmitted to the output shaft. The output shaft is wrapped by a flexible band which has one end fixed to the casing and the other end is connected to a connection device which is activated by the trigger device or the brake device so as to be pull the flexible band to change the friction to the output shaft.
